

ECOENER BOOSTS ITS EXPANSION IN THE EUROPEAN UNION WITH ITS FIRST 54.4 MW WIND FARM IN ROMANIA

- Ecoener has been awarded a 15-year contract in the Romanian government's renewable energy tender.
- It was the only Spanish company to win a contract, securing 5% of the wind power.
- The investment will be around €85 million.
- The construction works will begin shortly, with commissioning expected in 2027.
- “This project is a strategic milestone for the company because it will be our first asset outside Spain in the European Union,” says Luis de Valdivia, Chairman of Ecoener.
- Ecoener has over 1 GW under development in the European Union, in Romania as well as in Poland, Italy and Greece.

La Coruña, 11 September 2025.- Ecoener boosts its expansion in the European Union with the upcoming construction of a 54.4 MW wind farm in Miroslavesti, in north-eastern Romania, after being awarded a Contract for Difference (CfD).

The awarded CfD has a duration of 15 years and is directly backed by Romania. It was the only Spanish company to win a contract, securing 5% of the wind power.

The awarded contract is part of the second tender launched by the Romanian Ministry of Renewable Energy as part of a €3 billion programme designed to accelerate the country's energy transition. Backed by the European Union's Modernisation Fund, the Romanian Government is promoting the installation of 5 GW of renewable capacity through CfDs.

These CfDs guarantee a fixed price for an established period, thus providing financial stability and predictability in long-term revenues.

The wind farm

The wind farm will have 8 state-of-the-art wind turbines with an estimated total annual production of 166 GWh.

The expected investment for the new wind farm will be around €85 million.

The company plans to begin construction of the new asset shortly, with commissioning expected in 2027.

For Ecoener's Chairman, Luis de Valdivia, "this project is a strategic milestone for the company because it will be our first asset outside Spain in the European Union and, at the same time, it will position us in a European country that is strongly promoting renewable energy production." Luis de Valdivia also highlights that "this new contract reinforces our diversification strategy in new markets apart from Latin America. We have over 1 GW in projects under development across the European Union in countries such as Greece, Poland, Italy and Romania."

About Ecoener

Ecoener is a Spanish multinational specialized in renewable energy, with 37 years of experience in developing projects that aim for perfect environmental and social integration. It also seeks to generate a positive impact on communities. For the industrial point of view, it controls all the stages of the business cycle, from promotion and design to construction and management of hydroelectric power plants, wind farms and solar photovoltaic plants, as well as storage projects. It is present in 12 markets (Europe and America) through its projects in operation and under construction and its business development offices.
